

## Preventing landslide

To protect your family from landslides, you need to prepare routinely and evacuate quickly!

### Are you routine preparations enough ?

- **Have a room on all floors of your house furthest away from the cliffs that you can escape from.**
- **After heavy rainfall, be sure not to approach the cliffs for an extended period of time.**

### Can you evacuate immediately ?

- **Be aware of the state of the rivers and cliffs on a regular basis and if you feel in danger, be sure to evacuate.**
- **If an evacuation call is made, be sure to do so without hesitation.**

If you become aware of any of the following phenomenon then evacuate

Tress on a mountain side start slanting and cracks on

River levels dropping despite continued rainfall.

Rocks have fallen from the slopes of a mountain.

The muddying of usually clear wetlands and wells.

Hearing the sound of the earth rumbling.

A river becomes murky and starting having driftwood.

The amount of spring water suddenly increases.

Spring water that usually flows dries up.
